

Electrification LCI Study

Project Overview

The purpose of this study is to promote the installation of Electric Vehicle Charging Infrastructure (EVCI) within the CID area to assist in the development of a national and regional EVCI network.

With the recent push across the country to increase the availability of infrastructure for electric vehicles, the CID saw a need for developing a toolkit for stakeholders on how to achieve this task. Affecting the public and private sectors, an understanding of policies and programs at the consumer level is needed to provide this service. The goal of the study is to develop a framework of policies and guidelines to help accomplish this vision. This will include working with our local and regional partners to identify the gaps in the knowledge base and then educating the public on how a technological investment can be an asset to the community and visitors.

Key tasks of the study include:

- Understanding the technology on a consumer and proprietor level
- Working with local agencies to develop/ consider new policy and programs for EVCI
- Identifying a step-by-step process on how to achieve EVCI installation
- Prioritizing implementation strategies for the district

Partners

Planning & Analysis: Atkins

What's Next?

Project initiation will begin in December 2022. Work tasks include:

- Data collection and analysis
- Public involvement and outreach
- Plan development and prioritization
